

n-Propyl Gallate (CAS N° 121-79-9), or Propyl 3,4,5-trihydroxybenzoate is an ester formed by the condensation of Gallic acid and Propanol. It is an antioxidant added to foods containing oils and fats to prevent oxidation. It protects against oxidation by hydrogen peroxide and oxygen free radicals, in a catalytic manner similar to superoxide dismutase.

It is used in foods, pharmaceuticals, cosmetics, hair products, adhesives, and lubricants. As a food additive, it is used under the E number E310.

Minakem s.a.s., the sister company of Minasolve, is producing Propyl Gallate for decades on its production site located in Beuvry-la-Forêt (Northern France). Its knowledge and its organization are ensuring a very good control of the production.

Minasolve is selling Propyl Gallate to all of customers who are looking for a reliable quality and fair prices. We are able to propose to our customers some special grades (USP/NF EP & FCC). We usually are maintaining some safety stocks to be able to give a quick delivery to our customers.

On the other hand, Minasolve is able to provide different other Gallate derivatives: n-Octyl Gallate, Dodecyl Gallate ...
